

Light – Shadows!

So, can you remember what a shadow is?

A shadow is created when a source of light shines on an object but the light is blocked and does not pass through it.

Remember, objects can be either transparent, translucent or opaque.

Using the above information, can you help me work out if the following objects are transparent, translucent or opaque? I really need your help!

A child

A lightbulb

Sunglasses

A glass of water

A pencil

A window

A leaf

Rocks

A glass bottle

Reading glasses
