

## Understanding the World

Next time you go for a walk outside, see what different types of shops you can see. Can you see a baker's? ...a butcher's? ...a toy shop? ...a gift shop? ...a coffee shop? ...a fruit and vegetable shop?

Draw a picture of the different shops you see and have a go at labeling the picture.

## Literacy

Can you make a shopping list? Draw some pictures of things you would like to buy in a shop. Try writing the words to label each item.

Take your list with you when you go to the shops and help your grown up find the items in the shop, put them in the shopping basket and help carry them home with you.

## Maths

### Coins

Ask a grown-up to help you look at some different coins. What numbers, colours and shapes can you see? Place some coins under a piece of paper and try doing some coin rubbings using a crayon. Can you name and label the different coins?

### 3D shapes

Do you remember the names of these 3D shapes? Answer these questions with your grown up:

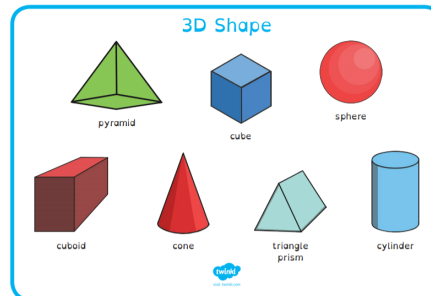

What is the name of the shape?

How many faces does it have? What shapes are the faces?

How many corners does the shape have?

When you go to the shops, talk to your grown up about the 3D shapes you see.

"The baked beans tin is a cylinder. The box is a cuboid".

## Communication and Language

With a grown-up, play a memory shopping game. Take it in turns to say things you would like to buy in a shop. Try to remember all of the items each person says. How many items can you remember?

Person 1: "I went to the shops and bought a banana"

Person 2: "I went to the shops and bought a banana and a teddy bear"

Person 1: "I went to the shops and bought a banana, a teddy bear and ..."

## Being Imaginative

Set up a pretend shop in your house. What will you sell? How much does it cost?

Role play being the shop assistant and the customer with your grown up or someone in your house. You could use real coins to pay for your shopping.
